

Sarawak DUN 1st Draft 2026 Redelineation

GeoJSON Boundary File — Dataset Metadata

Preview: 99 proposed DUN constituency boundaries (SYOR 1), colours for visual distinction only.

Dataset Metadata

Field	Value
Title	Sarawak DUN 1st Draft 2026 Redelineation (Low Resolution)
Description	Proposed boundaries of Sarawak's State Legislative Assembly (DUN) constituencies under "1st Proposal" (SYOR 1) of the Election Commission of Malaysia's 2026 redelineation exercise — the spatial counterpart to the SYOR 1 DUN attribute dataset.
Compiler / Publisher	TindakMalaysia Network Services PLT (civic data repository); primary source is the Election Commission of Malaysia (SPR) redelineation proposal
Geographic Coverage	State of Sarawak, Malaysia
Bounding Box (WGS84)	109.545°E – 115.683°E, 0.863°N – 4.994°N
Coordinate Reference System	CRS84 (WGS 84, longitude/latitude — urn:ogc:def:crs:OGC:1.3:CRS84)
Geometry Type	MultiPolygon (all 99 features; 2 features are multi-part, i.e. include separate exclave/island polygons)
Feature Count	99 features — one per proposed DUN constituency (matches the 99-row SYOR 1 DUN CSV)
Vertex Count	~13,400 total vertices; ~135 per feature on average — generalized ("Low Resolution") rather than survey-grade
Advisable Scale of Use	1 : 900,000 — suitable for state-wide overview mapping; not intended for cadastral, parcel-level, or legal-boundary determination
File Format	GeoJSON (FeatureCollection), UTF-8
File Size	~615 KB
Process Stage	SYOR 1 — first-stage proposal, subject to public objection/inquiry before final gazettal
License	CC BY
Companion Dataset	SYOR 1 PROPOSAL - PROPOSED DUN CONSTITUENCY.csv (attribute-only version with 2022 vs. 2026 comparison columns)

Attribute (Properties) Dictionary

Property	Type	Description
Id	Integer	Sequential feature identifier. Data quality note: Id = 36 is duplicated (assigned to both LINGGA and LAYAR) and Id = 44 is missing from the sequence — likely a source typo; does not affect the spatial or electoral data.
NEGERI	String	State name; constant value SARAWAK.
KODPAR	String (code)	Proposed parent parliamentary constituency code, e.g. P.193.
PARLIMEN	String	Proposed parent parliamentary constituency name, e.g. SANTUBONG.
KODDUN	String (code)	Proposed DUN seat code, e.g. N.05.
NAMADUN	String	Proposed DUN seat name, e.g. TANJONG DATU.
KODUNIK	String (code)	Combined unique identifier (KODPAR + KODDUN), e.g. P.193_N.05 — matches PROPOSED UNIQUE CODE (2026) in the companion CSV.
BILANGAN_P	Integer	Number of electors (“Bilangan Pengundi”) under the proposed boundary — matches TOTAL ELECTORS (2026) in the companion CSV.
PERATUS_EQ	Decimal (%)	Percentage of the electoral quotient — this seat’s elector count as a percentage of the state-wide average elector count per seat. Ranges from 50.39% to 167.84% across the 99 proposed seats; 100% indicates parity with the average.

Geometry Notes

All boundaries are MultiPolygon, even for seats with a single contiguous shape — a common GIS convention to keep geometry type uniform across a layer. Two of the 99 features contain more than one polygon part, indicating a constituency with a detached exclave or island area. Coordinates are stored at double precision, but the file name and vertex density indicate this is a generalized/simplified (“Low Resolution”) version of the boundary, appropriate for the advised 1:900,000 mapping scale — not for high-precision measurement.
